

Speculum Astrologicum:

OR AN

ASTROLOGICAL

GLASS,

Representing the

State of the Year, 1657. With

Astrological Judgments thereon, and

Tables ~~Astronomical~~ ^{Astrological} Observations ~~Chronological~~ very usefull.

AS ALSO

The Rising and Setting of the ~~Moons~~ ^{Moons} Aspects

of the ~~planets~~ ^{planets}, and time of High-water at

London-bridge, every day in the Year.

Referred cheifly to the Meridian of the

Famous and Flourishing University and City of

~~Oxford~~ ^{Oxford}, whose Latitude is

51 d. 42 m.

By JOHN CADERY

Φιλομαθηματικος

Videmus enim effectus multos hic in terra quorum
causas ignoramus, beneficio autem vere A
strologiae, causam suam ac originem supra nos
in Caelis habere cognoscimus. Zanch. de A-
stron. Pag. 118.

Printed by E. Bladwell, for the Company
of Stationers, 1657.

TO THE
TRULY NOBLE
And faithful Lover
of LEARNING,
THOMAS CURSON
Of Waterperrze in the County of
Oxford, ESQUIRE.

JOHN GADBURY humbly De-
dicates these his ASTROLO-
GICAL Labours in Testimony
of his Relative Respects.

A Computation of some things Memorable unto this present Year, 1657.

Since first (some say) this Globe of Earth was made	5606
Since by that dismall Deluge it decay'd	3950
Since Brute (this Island of) great Britain enter'd	2783
Since Aeneas so bintd fair London venter'd.	2704
Since Jesus Christ in Bethelern drew breath	1657
Since he resign'd it by a sharerull death	1624
Since England first receiv'd the Christian Name	1477
Since the bold Saxons to this Island came	1202
Since the proud Danes did (knavishly) invade us	825
Since Norman William (first) did overthade us	594
Since Guns (those cruell Engines!) first were knowne	277
Since the quick Germans first did Printing owne	214
Since th'sweating sicknesse did o're run our Land	107
Since Pauls consum'd by Heavens fiery-hand	96
Since Marcey Hill for three dayes space did go	86
Since (in that Year) there fell a tedious snow	75
Since London plagued with a Plague most farious	54
Since a great Frost, to England most injurious	50
Since Learn'd Sr. Walter Raleigh lost his head	39
Since Felton struck great Buckingham stark dead	29
Since Spain a Peace did last with England make	28
Since London bridge (poor Martyr) burnt (at stake)	24
Since the long Parliament grand institution	17
Since Thomas Earl of Straffords dissolution	16
Since the Demolishing of Cheap-side-Crosse	14
Since England pestred with Foot and Horse	14
Since Bishop Laud onto the Block did bow	13
Since Charles (late King of England) did so too	9
Since valiant Cromwell, Britains Ile subdued	4
Since here he govern'd a mixt multitude	4
Since in the Twis a Comet we espied	5
Since that we know the Pope of Rome hath dyed	3
Since great Bohemius's most pernicious Raine	3
Since Dove high Sheriff of Wiltshire (almost slain)	3
Since Harrison, &c. shut up in Port and Ile	2
Since Biddles Books were burnt (for Errors vile)	2
Since London plagued for her loose desires	2
Since she hath suffred four most dreadfull Fires	2
Since Protestants in Piedmont basely slain	2
Since England (last) abus'd by th' King of Spain	1
Since the poor Jews faine would have dwelt among us	1
Since our Divines resolv'd they should not wrong us.	1

A

A Table of Terms with there Returns, &c. for this present Year, 1656.

Destroy the Law! what shall * Aegyptius do?
Destroy the Law! poor * Pedro he shall go
In Equipage as stuel; say, much more
Shall be esteem'd, (for Pedro is but poore.)
But say, must Lawyers suffer? shall not men
O all Conditions smart alike? if then
The Cuncels, and the Council'd both must share,
"Long live the Law! shall be my dayly Prayer

* Arich Lawyer.
* A poor one.

WHereas you will find the Rising and Setting of the Moon, for every day in the year; this is to let you understand that I have Calculated it the vulgar way, but for the Use it is there intended, will serve without Error; for that it rarely misses a quarter of an hour in any place, of her apparent rising or setting. However for the satisfaction of the curious, I will shew (by a Practique Rule) how it may be done precisely.

To find the Moons Rising, you must first get the Suns Oblique Ascension, to the time of the Moons Rising, according to estimation (agreeing with the Latitude of the place you calculate for,) then get the Oblique Ascension of the Moon, from which if you subtract the Oblique Ascension of the Sun, and convert the remaining Arch into time, (by the degrees and minutes of the Equator) and adde the same to the hour and minute of the Suns rising, that shall give you the Moons true rising.

As for Example.

On the first day of January this present year 1657. the Moons estimate Rising is about five a clocke in the morning, at which time the Suns place is 21 d. 38 m. by
Suns Oblique Ascension is 323 d. 50 m.
Moons Oblique Asc. *cum circuli* 642. 51.
The difference is 319. 1.
which difference converted into time is 21 h. 16.
Sun rises the first of January at 8 2
Aggregate 29 18
Day Natural subtract 24 0
Moons true Rising at 5 18
Which differs very little from the Estimate of my ingenious Friend time, after the same manner may you finde Mr. A. Hensley, at the 3. her setting; for do but subtract the oblique Descension of the Sun, from the oblique Descension of the Moon, and turn the Remainder into time, and then adde it to the hour and minute of Sun setting, and you have the true time of her setting; the Moons Parallax is it; however the is not considerable in these operations; I pains hath been mine, need not to be more copious in a thing so plain and easie.

The reward of writing Books (of this Nature I mean) is so unworthy a mans pains, that I should not have troubled myselfe with the Moons rising and setting (notwithstanding the excellent use thereof) had not the importunity of my ingenious Friend time, after the same manner may you finde Mr. A. Hensley, at the 3. her setting; for do but subtract the oblique Descension of the Sun, from the oblique Descension of the Moon, and turn the Remainder into time, and then adde it to the hour and minute of Sun setting, and you have the true time of her setting; the Moons Parallax is it; however the is not considerable in these operations; I pains hath been mine, need not to be more copious in a thing so plain and easie.

The

The Left hand Page consists of seven Columns; the first shews the Dayes of the Month, the second, the Dayes of the Week, D being the Sunday Letter; the third Column holds the Festivals both fixed and moveable, as also the Suns rising and setting, and the beginning and ending of the Terms. The fourth contains the Moons place every day at Noon. The fifth contains the Suns place every day at Noon likewise. The sixth shews how, and when the Moon aspects all the Planets. The seventh discovers the Planets mutuall Aspects, and change of Aire.

The Right hand Page hath five Columns. The first is for the Dayes of the Month. The second for the Moons rising. The third for the Moons setting. The fourth shewes the time of High-water at *London bridge*. The fifth contains a Compendious Chronology of many things memorable, since the Yeare, 1641.

Vulgar Notes Explained.

		May	10
		May	20
		December	2

I dare not (like some Progmens) tell my friend, These Vulgar Notes serve for a Noteless end; But this I dare, those Dulmen would repent, Were *Englands* Synod, but like that of *Trent*.

January hath XXXI. dayes.

Bright Sol doth trine with most resplendant *Jove*,
Jove smiles on *Hermes*, squares the queen of Love,
Mars frowns upon her, from (sharp) *Sagittary*,
But *Jove*'s in (rugged) *Taurus* stat on aly;
" Mans Fate was ever various, and his birth
" Brings many fits of sorrow, few of mirth.

On the sixteenth day, 1656. Serjant Bradshaw after a nine hours
 hearing overthrew Mr Fretter for the office of the under Sheriff, albeit
 Mr Fretter had gotten the consent of the Major and Aldermen.

March hath XXXI. dayes

Observe how *Chronus*, doth confront the *Sun*,
Just as he enters 's Exaltation;
Bright *Cynthia* squares them both, from *Gemini*,
If thundring judgements darted from the sky,
Afflict [brave] *London*, we shall all cry then,
"Gods Fingers heavier, then the *Loyes* of men."

April hath XXX. dayes.

Gold is the Glory of the Saints on Earth!
 (Thrice happy he who holds this Doctrine forth)
 Gold makes the wicked-worldlings heart most mellow,
 Gold converts *Turks* to Saints it is so yellow;
 "Gold makes the Lawyer sell both faith and reason,
 "Twas Gold that made our *Presbiters* plot *Treason*

				the 29 day.	

May hath XXXI. dayes.

No sooner *Phæbus* entereth the Twin,
But War-like *Mars* doth draw his glitt'ring Sword,
And at him flyes; *Hermes* doth fo by him,
So Saints like Sinners sometimes break their word;
"Then hang a tender Conscience, that's a dart;
"To strike the Anti Christian to the heart.

July 30 17

Splendid *Ericina's* this Month in square
With war-like *Mars*, in *Sols* exalted chair.
Grim *Chromus* courts her, makes the Souldier jealous,
(Such Fire burns without the help of bellows)
"It Rustique *Mauvrs* once appear in thunder,
"Poor-modest-harmlesse-*Venus* must lye under.

August hath XXXI. dayes.

This Month old Saturn storms at Fulgent Jove,
And Mars, (as basely) flight's Approdite's Love,
Phaeton befreinds her; and so doth the Sunne,
But Mars Runs Backward, ere this Month be done,
"Blest Innocence, doth oft Survive to see
"Her Tyrant Foes Plag'd for their Surquedrie.

September hath XXX. dayes.

September last. the Planets all did joyne,
Now *Mars* affronts *Sol* in th'Ecliptique line,
He smiles on *Venus*; *Sol* and *Chronus* meet
In th'Signe of Justice, *Jove* and *Hermes* greet
Trigonally! "Here seems to be a mixture
"O' good and bad from this [high] intertexture.

October hath XXXI. dayes.

Now gentle *Zeus* squares grim *Falcifer*,
And he as angry throwes on th' god of War,
Mars rants at *Phaeton*, *Phaeton* *Venus* harms,
And *Pirous* (oy Direction) at her *Romans*.
To tell th' event, is quite beyond my Theame.
We want a *Daniel* to expound the *Dream*.

November hath XXX. dayes.

Here Mars and Jove in Quartile move again,
To pester's with freth storms of Wind and Rain.
Look to it Scotland, Holland, Denmark, France,
Heavens Sword is drawn, and likely to advance.
Invasions! Wars and Famine; nay a change
Of all things plagues you: for Gods judgments range.

December hath XXXI. dayes.

Stout *Mavors*, *Chronos* greets by opposition,
(Bright *Sol*, and *Hermes* doe him likewise square,)
And *Tove* with *Phæbus* shares the same condition,
All Threatning to Retard our *Christmas* cheer:
“But know kind Friends, (if you’l but rest content,)
“An *Easter* alwayes, doth succeed a *Lent*.”

Of the twelve Signs.

The *Zodiacke* the Princely Planets treasure,
Astronomers do thus divide at pleasure.

♈ Head	♊ Breast	♉ Reins	♋ Knees
♌ Throat	♍ Heart	♎ Secrets	♏ Legs
♐ Arms	♑ Belly	♒ Thighs	♓ Feet

An Epigram on the twelve Signs by Jo. Silvester.

Mans Head and Face Heavens Rām obey,
Our Neck, the Neck-strong Bull doth sway,
Th'arme twining Twins guide hands and arms,
Breast, Side and Stomack, *Cancer* charms,
The *Lion* rules our backe and heart,
Bowels and Belly's *Virgo*'s part,
Reins, Haunches, Navill *Libra* friends,
Bladder and Secrets *Scorpio* tends,
The half-horst-Bow-man claimes our Thighs,
Unto the Kid our Knees suffice,
Our Legs are but the Butlers Fees,
The Fish our foot-steps oversees.

Of the seven Planets.

The wandring Stars whom we do Planets call,
By Characters do we distinguish all

♄ Saturn	☉ Sol	☾ Luna
♃ Jupiter	♀ Venus	♈ Dragons-head
♂ Mars	☿ Mercury	♏ Dragons-taile.

Of the five Aspects.

Those seven Planers have Aspects
By which on men they work Effects:

♌ Conjunction	♌ Opposition	☐ Quartile
* Sextile		Δ Trine

From my House in Strand-lane.

J. G.

Let the Judicious Artist take notice that the Cutter hath committed
an egregious Error in the Figure of the Autumnal Equinox, in leaving
all the Characters of the Planets out of the Scheme, by which means
it is become altogether useless.

A Table of Interest at 6. per Cent. shewing the true Value of Money upon Interest from 10l. to 10000l. very usefull.

9000	45	0	00	18	00	00	27	00	00	36	00	00	45	00	00	54	00	00
10000	50	0	00	20	00	00	30	00	00	40	00	00	50	00	00	60	00	00

This Table is easily understood, and may serve sufficiently (with ad-
dition) for all Sums whatsoever, and times likewise; Example, I would
know what Interest 1000l. comes to in a Month; I find one thousand
in the first Column, and over against it under the first Month I find 5l.
which is the true value of it for one Month; and if you guide your
Eye forward, you will find its true Interest for six Months to be 30l.
which doubled will amount to 60l. in twelve Months; do so in the
rest, and you cannot fail.

A Table of the Kings and Queens of England, as they in order succeeded each other.

I know not what may hap to *Grantham* Spire,
But this poor Table's like to climb no higher.

Their Names	Years of Birth.	Began to Reign.	Reign. Y. M.	Ended their Reign.

K. Charles	1600	1625 March 27	23 11	9 January 30

All Earthly Honours, have their Rise and Fall
From him that writ upon *Babylon's* Wall;
Tis he alone that casteth some men downe,
And raiseth others up unto a Crowne;
Tis he, who pul'd *Saul* from his Princely seat,
And made *Sheep-keeping David* full as great;
Him let's admire! and never dread a change,
(For God thus workes) we're thank Gods workings strange.

An Excellent Table shewing the bearing distance (and height of the Pole) of the cheifest Cities and Towns in England from London.

Their Names.	The way they bear.	distance in mile	Height of the Pole.	Their Names.	The way they bear.	distance in miles	Height of the Pole.

The Explanation of the Tables of Revolutions.

A Revolution is chiefly taken (and indeed generally) from the Sun, because by his motion we measure Dayes, Months, and years; nay, the Sun is Times true measuring Reed; therefore a Revolution is the returne of the Sun to some known point of Heaven, from whence he departed; in Nativities and other Radixes it is the same, so saith Mr Lilly in his Introduction, Page 734.

There are many wayes for the attaining the exact time of a Revolution; but the plainest and most easiest of all (I mean for young Students) is this excellent Table of *Argols* in page 424. tom. I. of his Introd. the Use of which is easie, viz.

First, you must observe the place of the Sun, in Signs, Degrees and Minutes. Secondly, you must consider the year for which you would set your Revolution. Thirdly, with the year desired, you must enter the Column of years either in the first or last Page where the Sign of the Sunne is found; and in the collateral Column against the year you look for, under the Sign the Sun is in, you will find certain hours and minutes, to which you must adde the hours and minutes of the Birth or Radix you set your Revolution for, and if the aggregate exceed twenty four hours, or a day natural, then subtract twenty four hours, and with the Remainder, enter the Table of Houses, agreeing to the Latitude of your Place, and so you attain the true position of Heaven, as in any other Figure.

Example.

Let the Eclipse of the Sun on the sixteenth of Jan. 1656. at 1h. 26m. P. M. be supposed a Radix or Nativity, whose Ascendant is 3d. 14m. ♉ (as appears by the Figure in my *Speculum* for the last year.) Now to finde what Figure the Heavens will be in at its first years Revolution, I observe the place of ☉ to be 6d. 29m. ♊; therefore under ♊ against the first year, I look what hours and minutes there are, and I finde 5h. 49m. unto which I adde the time of the Eclipse, which is 1h. 26m. and the product is 7h. 15m. or fifteen min. past 7 a clock in the evening, which moment of time is the true Revolution or return of the Sun to his place in that Eclipse this 16d. of Jan 1657. And then the true Ascendant of the Revolution is 12d. 59m. of ♊, which is above the Quadrant difference from what it was in the Radix. I need not be more plain in a thing so obvious to every ordinary Capacity.

A Table of Revolutions for Nativities.

Of the Spring.

A *quinotium Vernal*, or the Spring, inchoates (always) when the Sun toucheth the first Scruple of *Aries*, making day and night alike long every where. And this year it falleth on March the ninth day, thirteene hours, ten minutes afternoon, the Heavens being disposed as in this following figure. And the Planets Places noted according to their Latitude, as is taught by *Hartgils Tables*.

Before I proceed to my *Judgments* on this (so fit a) *Position*, it will not be amiss that I adhere to the opinion of the *Antients*

Astrological Judgments, 1657.

Antients who have laboured much in this *Science*. *Ptolomy* adviseth to set four figures for each year, for the true discovery of the nature of the seasons, and these four to be set for that instant of time, the *Sun* enters each *Cardinall* point. See his *Quadrip.* lib. 2. C. 9. *Guido Bonatus* (with a little variation from *Ptolomy*) saith fol. 527. *Quando ☉ intrat ♈, si Ascendens est signum fixum, illa revolutio continet in se omnes quartus illius anni.* (i. e.) When the *Sun* enters *Aries*, if the *Signe* ascending be fixed that *Revolution* shall serve to judge all the rest of the year by: Many other excellent *Authors* consents freely with *Guido*, as *Haly*, *Maginus*, *Leupoldus*, &c. the later of which speaks expressly thus, *Si ascendens in revolutione est fixum, sufficit pro anno toto figura quam scisti: Si est commune fac duas: Si est mobile fac quatuor.* (i. e.) If the *Ascendant* in the *Revolution* be fixed, it sufficeth for the whole year, if common, then erect two figures, if moveable, then make four figures. The *Signe* ascending is a *Common*, *Bicorporeall* or *double bodied Signe*; therefore this figure will fitly serve for a ground sufficient, whereon to build my *Judgments* of this yeares *Vicissitudes* upon, until the twelfth of *September*, when the ☉ enters ♎ *Libra*: unto which time I will erect another *Scheam*, that I may not turn aside, from the opinion and practice of the *Antients*, both *Arabian* and *Latine Astrologers*.

In the mean time our *Rules* enjoyne us to take notice of ☉ as Lord of this *Revolution*, he is exalted in ♊, and in the second house of the *Heavens*, which is a house succedent: *Astrologers* say, *Quando ☉ est in Angulis succedentibus, vel receptus ab angulis, tum in illo anno bella futura demonstrat ex conditione loci in quo est, ejusque est latrocinium, furtum, praeda, viarum insidia, ferire, comburere & similia.* (i. e.)

When ☉ (in a *Revolution*) shall be in an *Angle*, or *Succedent house*, or be received by any *Planet* in an *Angle*, he demonstrates *warres* to be in that yeare, occasioned from that part, or place of *Heaven* wherein ☉ is located, he signifies likewise, that there shall be many *Robberies* and *Thefts*, *Breaking of Houses*, &c. he fires, or stirs up the spirits of men

Astrological Judgments, 1657.

men, and incites them to strike each other, and to burn, destroy and consume, *Houses*, *Villages*, *Cities* and *Ships*, and all other things that are *Combustible*.

Ah! *Poor London*! didst not thou experience the truth of this in 1655, when ☉ was Lord of the yeare, as now he is? was not thy *City* fired in many places? were not many of thy *Ships* burnt and consumed? were not many *hundreds* of thy owne *Children* undone? oh *England*! oh *London*! be watchfull and Repent.

My *Author* saith *warres* are portended, but I hope the *Prudence* of the *Major Generals* and *Sheriffes* in each *County*, will suppress the malignity of murmuring *Spirits*. ☉ is in ♋ a *southern* signe, and premonisheth the *Governours* of the *South* parts of *England* to be watchfull and vigilant, that they permit not such another childish and effeminate insurrection, as many poor *Soules* in the *West* of *England* smarted for 1655.

Prudent Governours are an honour to that *People* or *Nation* they *Rule*, The *Athenians* were not only watchfull to prevent a *Warre*, but vigilant and carefull to stay the force of *Warre*, when kindled, so the *Poet* expressed their indulgence, viz.

The dull *Athenians*, offered Sacrifice

To *Mars*, when *Wars* began to tyrannize.

Let *England* offer the *Sacrifice* of *Prayer* unto the Lord of *Hosts*, to mitigate the evill threatned unto it, or otherwise the dull *Athenians* will be more acceptable in the day of *Gods* wrath, then the clear and quit-witted *English*; for they offered *Sacrifices* to *Mars*, as *God*, when they knew no other (that is) no *Greater God*; but we of this *Nation* know, and are acquainted with the true *God*, now if our *Sacrifices* be not answerable to our knowledg, it will be more tolerable in the day of *God*, for the *Athenians*, then for us.

The *Moon* in this figure is in the 6th. in ♋, and although she be exalted there, yet she is in the terms of ♋, and detriment of ☉, and therefore presages many violent distempers to *Rage* the *Spring* and *Summer* seasons and those to keep
[their

Astrological Judgments, 1657.

their residence in the Brest, Throat, Reines and Secrets, the evils themselves are likely to be these, Melancholy, Falling-Sickness, Palsey, Collick, Menstruis in Women, Aposthams, Fluxes, (and those very dangerous) Suffocations of the Matrix, Gonorrhoea, Strangury, French-Pox, Weaknesse of the Stomach, &c. as they are peculiarly appropriated to their proper Planets, by my truly steadfast Friend Mr. Will. Lilly, in his Introduction pag. 247.

Saturn in this Revolution is in ♄ exalted, in the 9th house but Retrograde and Cadent, and opposed by the Sun.

'Tis the opinion of Albumazar, Si ♄ fuerit in revolutione remotus ab angulo, multiplicabuntur, veluti tam orientales, quam occidentales, eruntque homines in mutationibus. (i. e.)

If Saturn in any Revolution be removed from an Angle, the Eastern and Western winds, shall be more high then ordinary, and Men shall be much given to change, he is removed from an Angle here, so far that (as I said before) he is quite Cadent: Ergo, Mens minds will be like the winds, that is unstable. The same Author in another place saith, Proprietas ♄ est super divites & Judaeos, religiosos & agricolas, senes & decrepitos: Si fuerit impeditus in hora revolutionis, Indica eorum destructionem & impedimentum (i.)

The Right and Propriety of ♄ is upon Rich Men and Jewes, Husband-Men, and Men Religious, and Men that are both old, and decrepit: if therefore he be impedit in the hour of the Revolution, judge or pronounce their destruction and damage.

Et si Retrogradus, quod Rex illius regionis, quae fuerit in divisione signi in quo fuerit ♄ cadet in opprobrium, & dedecus valde magnum, quod non possit ei majus evenire, et equiparabitur morti. And if he shall be Retrograde (now he is so) the King or Governour of that Country, which shall be in the division of that Signe wherein ♄ is, shall fall into very great disgrace, then the which, greater can hardly befall him, this being full as bad as death it selfe. The division wherein ♄ is now, is the first, viz. ♄ ♄ ♄ ♄ The chiefe Kingdomes and Countreys subject to this Quadrangle, are Germany, Swedland, Poland,

Astrological Judgments, 1657.

Poland, England, Scotland, France, Holland, Zealand, Prussia, Austria, Livonia, Thrace, part of Turkey, Albania, Bulgaria, West-Indies, Stiria, Isle of Orcades, &c. having thus collected the Kingdomes and Countreys subject to this division; 'tis easie to say what Governours are threatened by ♄ Position. All that I shall say, is this, Blesse oh Lord, the Governour and Governours of this Nation, and defend them from the sting of this evill Portent, and for the Rulers of other Nations let them pray for themselves.

Saturn is in ♄ of ☉, which is the general signification of Great Rulers, as Emperours, Princes and Governours; what's signified by such a Position let Haly tell us, Pars 8. Fol. 362, Si ♄ fuerit vel in ☐, ☌ vel ☌ ☉ Regibus damna & infirmitates quae accident in hominibus, & in substantiis eorum. (i. e.) if ♄ shall be either in ☐ or ☌ of ☉ he threatens much detriment unto Kings and Great ones in their fortune and Estate, this affliction follows the skirts of great ones; 'tis ♄ opposes ☉ and he exalted in the Midheaven, the House of Dignity and Honour, but sapiens dominabitur astris; I question not, but that the prudence and care of those who sit at the Stern of Government in this Nation, may prevent the evill desires and designs of discontented and Repining spirits, whether in secret and underhand Contrivances, or open and Impudent Attempts, against either their Persons or Power. I very well am confirm'd, that the spirit (or will) of man, (while endued with Reason) is subject to no, stoicall or fatall necessity; for, Astra non necessitant, sed inclinant, nor can that of the Poet be true in every individuall man.

Fatis agimur, cedite fatis,

Non solite possunt curae

Mutare rati stamina fusi

Quicquid patimur mortale genus,

By Fate we are impel'd, submit

To what the Destinies think fit

That thrud, be'ch fatal Damsels spun,

By our Cares can ne'r b'undone.

It is only true in those who follow their sensitive appetite, and wilfully degrade Reason of his Dignity in them, and of this opinion is that Reverend and truly Orthodox Divine Dr Gell,

Quicquid agimus venit ex alto,

Non illa Deo vertisse licet

Quae nexi sunt currunt causas.

In English thus:

What we all, what underge,

From their fixt Decrees doth flow,

None himselfe cannot controul

What does from linked causes rowl.

Astrologically Judgments, 1657.

in his Sermon stiled *Stella Nova*, P. 19. speaking of mens brutish Principles, saith, This (to me) is an *Argument* that the present generation of men in this *Land*, is, and bath bin extreamply *british*, *corrupt* and *sensuall*; and withall, that the Principles of *Astrology* are firme and good, in that their Predictions touching this present age have proved so true, which *never* could have come to passe, had men acted according to the principle of *Christian Faith* and *right Reason*. Oh! that men, that men of all sort would abandon *sensuality*: I had rather be wholly deceived in my judgement, then the *choise*st, (nay rather then any) man or men of this *Nation* should partake of the evill of those my Predictions, and so I conclude the *Spring Quarter*.

Of the Summer.

Solstitium Aestivum, or the Summer Solstice, initiateth on June the 10d. 16b. 14m. P. M. the Earth at that time being revolved to its greatest Southern inclination, making greatest quantity of Sunshine, and least proportion of Shadow, or which is all one, longest dayes and shortest nights among us, the ☉ then entring ♋ or the Earth ♍. This season is the Countrymans rejoycer, filling him with fresh delights, strong enough to destroy the melancholy that the alternate Spring bred in him; therefore Du bartas P. 36. saith thus,

Summer crowns his Ceres

With gilded Eares, as yellow as her hair is;
The Reaper panting, like a full-blown Rose;

The Reaper panting both for heat and pain
With crooked Blade

With crooked *Razer* shaves the tufted plain.

Now I come to my second Figure (which I promised at the beginning.) of the *Suns* entring \square , which is as followeth.

The Figure of the other *Revolution* was not so bad; but this is rather worse; the *Angles* of the Figure are *fixed* and *moveable*; the Accidents of this Season, or those things which are dependant on this Figure, will be answerable unto them; we will examine the sense of *Authors* on this Position, and first hear what an *Arabian* Author saith of ☉ ♄ and ♀, being conjoyn'd in the Signe ♎ *Libra*; it signifies the ill state

Astrological Judgments, 1657.

state of *Noblemen*, and men in Authority : evil to *Secretaries* ; *Mortality* in Women and Men who are *Just* ; many showers, cloudy and evil Aires. If the just and the upright men are threatened, what shall become of the unjust ?

Saturn and Jupiter are in Quartile from Cardinal Signs, viz. ♄ and ♃ both their Exaltations, *Eo in anno nulla quies cum ♄ & ♃ sunt in ☊ vel ♉, nunquam enim mentes hominum quiescent: (i.e.)* In that Year (or Revolution) there is neither rest nor quietness when ♄ and ♃ are either in ☊ or ♉, for at that time mens minds are never quiet or settled.

Jupiter is *Cadent* and in the third house of Heaven, in *S* a weak and effeminate sign, (yet he is *exalted* there) and in *Feminine, Lame* and *deficient* degrees of that Sign; what
 4 fig-

Astrological Judgments, 1657.

♃ signifies by being thus impedit in a Revolution, let an Arabian tell us; *Jupiter non bene posita in Revolutione Anni, Indicum & Sapientium legis negotia damnat, & eis accident multi labores & gravitates, erit damnum in nobilibus, & eorum filiis, & divitibus & magnatibus, & multa Ecclesie & Oratoria destruentur, & illi quibus conveni facere bonum non facient illud, sed deteguntur delicta multorum in terra illa.* (i.e.) When ♃ is ill placed in a Revolution, he produces great damage unto the Judges and Students of the Law; many labours and evils to befall them; and much detriment to befall the Nobles of the Land, and their issue; he threatens the destruction of many Churches and Oratories, &c.

We might note many other remarkable things in this Figure, as the position of Venus (Governess of the Horoscope) in the fifth in Leo a *steril. sign.* and in Quartile to the Ascendant, which intimates no great felicity to Teeming women, nor Children neither. We might also observe the position of ♄ Cauda in the second, threatening a Consumption of the Purse to the Commonalty in general. We might take cognizance also of Luna being located in the twelfth in Opposition to Saturn, and Quartile of Jupiter, and tell the World many Imprisonments, Sickneses and fallings out among brethren may be the issue of such Configurations. Nay, we could take notice of Mars being in the twelfth in a moveable Signe, and say, *Mars in signo mobili multas lites efficit, (i.e.)* Mars so posited, inclines the temper of men to Law-suits and Controversies, and here being in the twelfth, viz. in the House of Imprisonment and sorrow, intimates the ruine of many men by such means, and that men shall willfully consume and waste themselves, and it may be (for any Clemency there is likely to be found in Creditors) they may even rot and consume under their Bonds of restraint.

I could also from the affliction of Jupiter in this Figure give the SPANIARD notice of the many miseries attending him, as also from the threefold Quartile of Mars with Jupiter, viz. the first, on June the fifth day; the second,

on

Astrological Judgments, 1657.

on October the twelfth day; the third on November the ninth day; but I shall leave these things to abler Pens, and only tell the Kingdom of SPAIN of one or two Predictions delivered a dozen years since by Master Lilly, much reflecting on them, the first is in *Engl. Prophetique Merlin*, page 111. where of the year 1657. viz. this year, this worthy Artist saith——— Very great matters are now in agitation al over Europe, the AUSTRIAN FAMILY is much herein concerned. And in Page 117. of the same book against the same year he hath these words——— SPAIN loseth by a Tempest——— Who is there in Europe of any understanding but knows and sees these Predictions a fulfilling? Ah Spain! such a Tempest hangs over thee, and is now ready to fall on thee, that thou hast not known the like of these 100 years. make peace betimes with the English, so may thy Tempest turne into a Calm; if thou refuse, this Tempest will follow thee with thunder and lightning; 'tis such a Tempest which is hideous to mention; death of thy Children, Dearth of thy Cattle, destruction of thy Governours, (as Bajazet found a Tamberlain, so may Spains King find an English PROTECTOR,) losse both at home and abroad! from such Tempests God preserve all those that feare him; I may now sing the Song of good old Horace unto poor Spain, viz.

— The Gods neglected

Have many Plagues on wofull SPAIN injected;

But I conclude this revolutionary Figure, and descend unto Winter.

THIS Quarter Astronomically begins at that time the ☉ touches the first point of ♍, or the Earth ☿, making shortest dayes and longest nights on this side the Equator, and falleth this year on December the tenth day 18 hours, 42 minutes after noon, that is almost at 7 of the clock the next day in the morning; but the last Figure in some measure comprehending the Judgments of this Quarter, I shall not need to reiterate

Of Eclipses this Year, 1657.

THIS Year there will be four Eclipses, the first of which will be of the Sun on the first day of June neer our ten a clock at night, therefore not visible unto us.

The second is of the ☾ on the 15 of June at halfe an hour past eight a clock

Astrological Judgments, 1657.

a clock at night; this will be a *Totall Eclips*, and falls in the *Ascendant* of *Oxford*; the beginning of this *Eclips* will not be seen of us, but the middle and end may, if the *Ayre* be serene. I shall not treat of this *Eclips* at large, I shall only tell my *Countrymen* of *Oxford* that it is the *Prodromus* of many unparallel'd mischiefs to that City and *Universi-ty*; some of the greatest *Persons* there are threatened with untimely *Deaths*; I am afraid of an *Approaching Mortality* unto them, for the *Lord* of the *Ascendant* at the time of the *Eclips* is in *Domin Morris*; *Deus avertat*.

The third *Eclips* is of the *Sun* on the 25 day of *November* near seven a clock in the morning, but will not be seen of us.

The fourth is of the *Moon* on the tenth of *December* near seven a clock at night, and will be visible at *Oxford* and to all *England*, it happens in the *Ascendant* of *London*, but the defect is small, Ergo the *Effects* cannot be great.

Thus have I given a touch upon this years *Vicissitudes*, or rather God by my *Father* hath rewarded some of the *Nations* of *Europe* of somewhat probable to befall them.

Go now my Book unto the World and tell
Them what's to come, be it or ill or well.
Let *Follies* fear! the message is Divine,
And the most lib'ral of the *Seven* doth shrine
Thy Youthfull Face: thou'st many a noble Friend
Will welcome thee ————— here therefore shalt thou
